**Clinical Statistics of Registered Patients, 2012**

**Japan Society for Head and Neck Cancer  
Cancer Registry Committee**

## Preface

The Head and Neck Cancer Registry in Japan has been supported by the Japan Society for Head and Neck Cancer since 2003. The annual reports have been published from 2003 to 2005 as supplements of the journal of the Japan Society for Head and Neck Cancer. Through the support of many institutions and the Japanese Society of Oral and Maxillofacial Surgeons, 3,219 treated cases in 2003 were registered in 2005.

Unfortunately, because the Act of the Protection of Personal Information was enforced in 2005, it made cancer registration very difficult in Japan. The Japan Society for Head and Neck Cancer has decided to discontinue the registration of patients treated in 2004 and thereafter.

After several extensive discussions and investigations from the point of view of personal information, maintenance and finances for the registry system, the Japan Society for Head and Neck Cancer decided to resume the registry using the system of University hospital Medical Information Network (UMIN) Center in Japan. The online registration was initiated on May 25, 2012 after renewing the contents and methods of registration.

Last year, the first report of the renewed registration was published and this supplement is for the second year of the registration. The registration without any incentives for doctors of the participating institutions makes it difficult. However, the importance of cancer registration has been recognized widely in Japan, and the number of participating institutions has been increasing. Since this vast organ-based registry led by doctors would contribute to the understanding of statistics and modes of treatment of head and neck cancer in detail, other than hospital-based or population-based cancer registry in Japan, the development of this registry might be necessary.

We would like to express the deepest appreciation to Dr. Masahisa Saikawa, the former chairperson of Cancer Registry Committee, who reconstructed the brand-new registration system. Furthermore, we would like to express our gratitude to all the doctors in the participating institutions and the members of UMIN Center as well.

**Data Collection**

All the doctors who are members of Japan Society for Head and Neck Cancer are advised to participate in the registration. More than one who expressed their cooperation in an institution could be a participant of the registration. A participant was provided a UMIN (University hospital Medical Information Network in Japan) ID and a password for INDICE (Internet Data and Information Center for Medical Research) from the UMIN center and registered data of the cases in his institute to the INDICE system on line. The completed registration provides information regarding patients' age, gender, tumor pathology, TNM classification, therapies (surgery, radiation and chemotherapy), and prognosis. In this year, the second year of resumption, all the data stored in the INDICE system were reviewed by head and neck oncologists and analyzed from all aspects, except regarding prognosis.

Registration was restricted to previously untreated malignant head and neck tumor cases which had pathological confirmation, i.e. in the oral cavity, larynx, hypopharynx, oropharynx, nasopharynx, nasal cavity, paranasal sinuses, and major salivary glands. Tumors arising in the cervical esophagus and thyroid gland were excluded from the registry. These head and neck tumors were classified according the General Rules for Clinical Studies on Head and Neck Cancer (The Fifth Edition, June 2012, Japan Society for Head and Neck Cancer), which are based on the TNM Classification of Malignant Tumours (Seventh Edition, 2009) of the International Union Against Cancer (UICC).

From May 25, 2012 to Feb. 3, 2014, a total of 4,104 cases in 2012 were registered from 55 institutions. Two hundred and five cases were excluded (because of the unknown presentation of diseases: 122; previously treated cases: 80; without reported pathology: 2; not malignant pathology: 1), making the total number of registered patients 3,899. The starting date of initial therapy for 2012 cases was during the period from Jan 1 to Dec 31, 2012.
